

## Champion Carbide Tipped Hole Cutters

Champion Rotobrut<sup>®</sup> CT7 Carbide Tipped Hole Saws are the new "Contractor's Helper". Cutting quick, accurate holes in pipe or drilling through thick steel is no longer a problem with the triple edge cutting power of the CT7 hole saw. Ideal for cutting holes in steel and stainless steel up to 1" thick. Drills holes from 5/8" to 4-1/2" diameter. Special tungsten carbide teeth outlast and outperform traditional bi-metal saws and step drills often by as much as 10 to 1.

Effective length of 1" allows the pilot drill to pierce the opposite side of the door

for easy hole spotting.

- Productive- many more holes produced than bi-metal hole saws and step drills.

- Efficient- drills holes in 1/3 the time of alternative tools.

- Cuts faster and cleaner, without burs in stainless steel.

- Built-in ejector spring and pilot drill provide quick, smooth discharge of metal slugs for greater productivity.

- One-piece construction- no assembly required.
