

## Apex Screwdriving Bits

Apex® has maintained a position of leadership in industrial fastening tools. Apex® quality begins with select raw materials. Only carefully chosen, high grade tool steel is used to make Apex® industrial fastener tools. Each tool is precision machined from solid bar stock to close-tolerance standards. You always get an exact, sure fit.

What's the difference between an insert and a power bit?

Insert bits are commonly used with a bit holder in power tool applications. This combination is economical, provides flexibility and allows a fastener to be magnetically held by the bit. Power Bits are placed directly into the power tool chuck.
